

# OralID

Shine light. Save lives.

## Consent Form – Oral Cancer Screening

Our office strives to bring our patients state-of-the-art technology to provide you with the latest advancements in oral health. We have recently introduced the OralID screening device into our practice. The OralID examination will allow us to visualize any oral mucosal abnormalities including cancer and dysplasia (pre-cancer) before they can be detected with the naked eye. The procedure is quick, painless and no rinses or dyes are used.

Similar to other cancers, early detection of Oral Cancer is critical. Studies have shown that early detection of oral cancer with technologies like the OralID dramatically improve the survivability of the disease. If oral cancer is detected in the later stages, which typically occurs during a conventional oral cancer exam, the chances of survival are dramatically reduced.

### Who is at risk?

- **Age – 17+years**
- **Tobacco Use**
- **Alcohol Use**
- **HPV Infection**

If you have any questions about risk factors, please feel free to talk to our hygiene staff. We recommend all of our patients be screened with the OralID to reduce the mortality of late stage detection.

Our office charges \$20 per screening with the OralID. **We will attempt to bill your insurance, but we are finding it is typically not a covered service. You will be responsible for this \$20 of potentially life saving exam** if insurance does not cover it.
